The global Digital Power System Management (DPSM) market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Digital Power System Management (DPSM) is a method of monitoring, controlling, and optimizing power systems using digital technology. Compared to traditional analog methods, DPSM can achieve more efficient power system management, provide more precise and intelligent monitoring and data analysis of power system operating status, thereby improving power density, efficiency, and reliability.

DPSM typically includes microprocessors, digital signal processors (DSPs), analog-to-digital converters (ADCs), and communication modules, which work together to achieve real-time monitoring, control, diagnosis, and prediction of power systems. DPSM can be applied to various power systems, including DC/DC power supplies, AC/DC power supplies, LED driver power supplies, etc., and is widely used in electronic manufacturing, information industry, aviation and aerospace, automotive electronics, medical and other fields.

United States market for Digital Power System Management (DPSM) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
