## Abstracts

The global Digital Scenic Area Dispatch System market size is predicted to grow from US$ 246 million in 2025 to US$ 500 million in 2032; it is expected to grow at a CAGR of 10.9% from 2026 to 2032.

The Digital Scenic Spot Dispatch System is a comprehensive management platform that leverages technologies such as the Internet of Things, cloud computing, and big data to provide real-time monitoring and intelligent dispatch of scenic spot visitor flow, facilities and equipment, traffic management, and security monitoring. Through systematic data collection and analysis, it enables visitor diversion, resource optimization, and dynamic dispatch, improving scenic spot operational efficiency and the visitor experience while ensuring scenic spot safety and environmental protection. The system also automatically adjusts services and transportation during peak periods to reduce congestion and overdevelopment.

Currently, digital scenic spot dispatching systems are experiencing rapid development. As the cultural tourism industry transitions toward intelligent and refined management, scenic spot managers are increasingly demanding improved visitor experiences and safety. This has driven widespread adoption of systems centered around a "digital middle platform + intelligent dispatching" approach, particularly in 5A scenic spots and large-scale cultural tourism projects. Local policies are also encouraging the development of "smart scenic spots," further driving market expansion.

In terms of market competition, traditional IT vendors, smart hardware companies, and emerging cultural tourism technology companies are rapidly entering the market, creating a diversified competitive landscape. System integration capabilities, data algorithm optimization, and localized operations and maintenance services have

become core competitive advantages. In the future, with the integration of AI and large-scale modeling technologies into dispatching systems, the market will move from infrastructure development to deeply intelligent operations, and the overall market is expected to maintain steady growth.

Digital scenic spot management systems are rapidly evolving towards intelligent, platform-based, and refined capabilities. With the application of new technologies such as 5G, artificial intelligence, and edge computing, these systems are evolving from traditional ticketing and video surveillance systems to comprehensive, data-driven intelligent platforms. These platforms offer real-time visitor flow forecasting, visitor behavior analysis, and emergency warning and dispatch capabilities. Furthermore, these systems are integrating with front-end touchpoints such as mini-programs, mobile apps, and voice guides to achieve a closed-loop service experience throughout the visitor journey, enhancing user experience and operational conversions.

In the future, digital scenic spot management will prioritize open connectivity and ecosystem collaboration, gradually integrating with external systems such as transportation, cultural tourism, and urban management, and establishing a cross-departmental and cross-regional data sharing system. Furthermore, lightweight, SaaS-based solutions for small and medium-sized scenic spots will rapidly gain adoption, driving a fundamental shift in management models across scenic spots nationwide from "manual + experience" to "intelligence + data," contributing to the high-quality development of the cultural tourism industry.
