A digital baby weighing machine, also known as a digital baby scale or infant weighing scale, is a specialized medical device designed for accurately measuring the weight of infants and newborn babies. These scales are commonly used in hospitals, pediatric clinics, maternity wards, and homes to monitor the growth and health of babies. They provide a precise measurement of a baby's weight, which is a critical parameter for assessing the baby's development and overall well-being.

There is a trend toward developing smaller, more compact, and portable spectrophotometers. These instruments are suitable for fieldwork, point-of-care testing, and applications where on-site measurements are required.
