A digital streaming rearview mirror, also known as a digital rearview mirror or digital rearview mirror camera system, is an advanced automotive technology that replaces the traditional rearview mirror with a digital display screen. Key features and components of a digital streaming rearview mirror include:

Camera(s): Typically, high-resolution cameras are mounted at the rear of the vehicle to

capture the view behind the car. These cameras provide a wide-angle view, enhancing visibility compared to traditional mirrors.

Display Screen: The digital display screen is usually an LCD or OLED screen integrated into the rearview mirror housing. The captured video feed from the rearview cameras is displayed in real-time on this screen.

Live Streaming: The system continuously streams live video from the rearview cameras, providing an unobstructed view of the area behind the vehicle, even if there are passengers, cargo, or headrests blocking the traditional rear window.

Adjustable View: The digital rearview mirror often allows the driver to adjust the view settings, such as zoom in or out, adjust brightness, or switch between a normal rearview mirror view and the camera feed.

Anti-Glare Functionality: The digital display is designed to minimize glare and improve visibility, especially during nighttime driving or in bright sunlight.
