The global Digital Surface Tensiometer market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A digital tensiometer is an instrument used to measure the surface tension of liquids. It calculates surface tension by measuring changes in the topography of a liquid's surface. Digital tensiometers usually consist of a liquid tank and a measuring head. During the measurement, the measuring head is immersed in the liquid and measures the shape change of the liquid surface, and then converts the data into digital signals and displays them on the instrument screen. Digital surface tensiometers are widely used in chemical, pharmaceutical, textile, food and other industries to measure parameters such as surface tension, liquid surfactant content, and liquid interfacial tension.

United States market for Digital Surface Tensiometer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Digital Surface Tensiometer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
