The global Digital Tax market size is predicted to grow from US\$ 719 million in 2025 to US\$ 1454 million in 2032; it is expected to grow at a CAGR of 10.8% from 2026 to 2032.

Digital Tax refers to the use of information technology and communication means to realize the digitization, informatization and intelligence of tax work. It includes all aspects of tax data collection, processing, analysis, management and application, aiming to improve the efficiency and accuracy of tax work, strengthen tax collection and supervision, and promote tax fairness and transparency.

With the development of technologies such as artificial intelligence and big data, Digital Tax will continue to become more intelligent and automated. For example, machine learning technology is used to realize automated tax prediction and risk assessment, and natural language processing technology is used to realize automated tax consulting and customer service.
