The global Digital Telemetry (TMS) Torque Sensors market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Digital Telemetry (TMS) Torque Sensors feature a non-contact digital telemetry design that enhances data acquisition integrity by increasing resolution and eliminating mechanical interference; thus providing a more accurate indication of actual torque. Friction (contact) is completely eliminated and maintenance requirements are reduced. There are no touch points in the digital telemetry system. The whole system is composed of transceiver module, coupling module and signal processing module. The transmitter module is integrated in the torque sensor and amplifies, digitizes and modulates the RF carrier signal from the sensor, which is received by the caliper coupling module (receiver). The digital measurement data is then recovered by the signal processing module.

United States market for Digital Telemetry (TMS) Torque Sensors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Digital Telemetry (TMS) Torque Sensors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Digital Telemetry (TMS) Torque Sensors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
