The global Digital Test System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A digital test system is a specialized setup used to test and validate digital electronic devices, such as integrated circuits (ICs), printed circuit boards (PCBs), and digital systems. These systems perform a variety of tests to ensure the functionality, performance, and reliability of digital components and systems. Digital test systems typically include a combination of hardware and software tools designed to automate the testing process and provide accurate and consistent results.

According to SEMI, worldwide sales of semiconductor manufacturing equipment increased 5% from \$102 billion in 2021 to an all-time record of \$107.6 billion last year. The record high for semiconductor manufacturing equipment sales in 2022 stems from the industry drive to add the fab capacity required to support long-term growth and innovations in key end markets including high-performance computing and automotive. Global sales of wafer processing equipment rose 8% in 2022, while other front-end segment billings grew 11%. After robust growth in 2021, assembly and packaging equipment sales decreased 19% last year while total test equipment billings contracted 4% year over year.
