According to this study, the global Digital Video & Monitor Cable Assemblies market size will reach US\$ 804 million by 2031.

Digital Video & Monitor Cable Assemblies allow different connectors at each end to connect visual displays.

Digital Video connectors are used to deliver the highest quality video signal. The technology uses TMDS (Transition Minimized Differential Signaling) to transmit large amounts of digital data from the source to the display, resulting in a high-quality image. DVI (Digital Visual Interface) was developed by the industry body DDWG (the Data Display Working Group) to send digital information from a computer to a digital display, such as a flat-panel LCD monitor. HDMI took a step forward by integrating audio and video into a more compact interface.
