## Abstracts

According to this study, the global Dihydropyridine Calcium Channel Blockers market size will reach US\$ 1744 million by 2031.

Dihydropyridine calcium channel blockers (DHP-CCBs) are a class of medications that selectively inhibit L-type calcium channels in vascular smooth muscle, leading to vasodilation and reduced blood pressure. They are primarily used to treat hypertension and angina pectoris. Common agents include amlodipine, nifedipine, and felodipine. DHP-CCBs are known for their strong effect on peripheral vasodilation with minimal impact on cardiac conduction, making them distinct from non-dihydropyridine calcium channel blockers.
