Dilute arnica oil is a preparation made by diluting arnica essential oil with a suitable carrier oil. Arnica essential oil is extracted from the flowers of the arnica plant (Arnica montana), which has long been recognized in traditional medicine for its potential therapeutic properties. However, arnica essential oil is highly concentrated and can cause skin irritation if used directly. By diluting it with a carrier oil such as jojoba oil, coconut oil, or almond oil, the concentration of arnica is reduced to a safer level for topical application.

Dilute arnica oil is commonly used in the field of natural medicine and beauty care. It is believed to have anti - inflammatory, analgesic, and wound - healing effects. People often use it to relieve muscle pain, reduce swelling caused by bruises or sprains, and promote the healing of minor cuts and abrasions. It is also sometimes incorporated into massage oils or skincare products for its potential benefits.
