According to this study, the global Dimension Stone Mining market size will reach US$ million by 2031.

Dimension stone is a natural rock that is cut into various sizes for use in the construction and monument industries. This industry comprises the development of mine sitesmining and quarrying of dimension stones. Dimension stone productslude blocks of rock such as marblegranitelimestonesandstone and slate. Subsequent to cutting and polishingthese stones are used in construction of buildings and monumentsand also as exterior and interior decorative materials of buildings.

Remote surveying and geological mapping for mines and quarries isreasingly being done using LIDAR and UAV as it offers fastaccurate data to plan mining processes. LIDARwhich stands for light detection and rangingis a remote sensing method that uses light in the form of a pulsed laser to measure ranges (variable distances). LIDAR is used for surveying the mining area and helps in determining ore bodymining pit volumeand pre-strip and spoil surface volumes. UAVswhich stands for unmanned aerial vehicle or droneis a type of aircraft that operates without a human pilot onboard. The recent improvements in technology have resulted in the development of UAVs for multiple purposes. In miningUAVs are used for aerial photographyremote sensingand searchingmonitoring and providing information from hazardous locations.
