The global Dimethylamine Solution market size is predicted to grow from US\$ 193 million in 2025 to US\$ 267 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Dimethylamine solution refers to an aqueous solution product formed by dissolving dimethylamine gas in water. It is one of the important basic organic amine chemical raw materials and is usually sold and transported in the form of a certain mass fraction solution. Common concentrations include 30%, 40%, and higher specifications. This product has the characteristics of strong alkalinity, high reactivity, and good solubility. It is widely used in pesticide intermediates, pharmaceutical chemicals, rubber auxiliaries, dyes, surfactants, solvents, and electronic chemicals. It is an important basic raw material in the fine chemical industry chain. In 2025, global Dimethylamine Solution production reached approximately 654 K MT, with an average global market price of around US\$ 302 per ton.

In recent years, the overall market for dimethylamine solution has maintained steady growth, mainly driven by the continued expansion of demand in the pesticide, pharmaceutical intermediate, and new materials industries, especially in the production of pesticide herbicides and pharmaceutical raw materials where demand is relatively stable. At the same time, with the upgrading of the fine chemical industry towards high added value, the downstream demand for high-purity and stable supply of dimethylamine solution continues to increase, promoting the industry's development towards scale and integrated production. The core driving force for future market growth mainly comes from the expansion of the chemical industry in Asia and the increasing demand for chemicals related to new energy materials. However, the industry is also facing factors such as fluctuations in raw material methanol prices, stricter

environmental requirements, and strengthened safety production supervision. Overall, the dimethylamine solution industry will show a stable growth trend with gradually increasing concentration.
