The global Dimethyldioxirane market size is predicted to grow from US\$ 55.76 million in 2025 to US\$ 91.40 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

Dimethyldioxirane (DMDO) is a highly reactive, volatile organic peroxide (a dioxirane) typically generated in situ from acetone and an oxidant such as potassium peroxymonosulfate (Oxone). It is widely used as a powerful electrophilic oxidizing agent for epoxidation of alkenes, hydroxylation of hydrocarbons, and selective oxidation in fine chemical and pharmaceutical synthesis. The supply chain is on-demand and laboratory-centric rather than bulk commercialized: upstream inputs include acetone (derived from cumene phenol processes) and oxidants like Oxone (from specialty inorganic peroxide producers); midstream involves in situ generation in reactors or continuous-flow systems due to DMDO's instability and short lifetime; downstream use is concentrated in pharmaceuticals, agrochemicals, specialty polymers, and academic research, where high selectivity and mild reaction conditions are required. Because DMDO cannot be safely stored or transported at scale, its market is effectively embedded within end-user synthesis processes rather than existing as a standalone traded chemical commodity. In 2025, global Dimethyldioxirane output was about 3,000 tons with 5,000 tons of capacity, average prices of USD 20,000-35,000 per ton, and gross margins around 36%.

United States market for Dimethyldioxirane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Dimethyldioxirane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Dimethyldioxirane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
