The global Dioctyl Sulfosuccinate market size is predicted to grow from US\$ 426 million in 2025 to US\$ 621 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Dioctyl Sulfosuccinate, usually existing in the form of sodium salt and also known as sodium diisooctyl sulfosuccinate, is a classic anionic industrial surfactant. It is typically produced by the esterification of maleic anhydride with isooctyl alcohol, followed by sulfonation and neutralization with sodium bisulfite. Its molecular structure consists of dioctyl hydrophobic chains and a sulfonate hydrophilic group, endowing it with excellent wetting, penetrating, emulsifying and dispersing properties. It features low foaming, hard water resistance, adaptability to a wide pH range and high stability. According to active content and physical form, DOSS is classified into liquid DOSS-50, semi-solid DOSS-70/75 and solid DOSS-100. Widely used as a highly efficient wetting and penetrating agent in coatings, inks, textiles, leather, pesticide additives and other fields, it also serves as an emulsifier and dispersant in latex synthesis, industrial cleaning and polymer polymerization systems, making it a commonly used high-efficiency penetrating surfactant in industrial applications. In 2025, prices of different grades of global Dioctyl Sulfosuccinate diverged. The average price of DOSS-50 was approximately 2,800 USD per ton. DOSS-70/75 and DOSS-100 were priced significantly higher than DOSS-50 due to their higher active content and increased processing costs. The overall average gross margin of the industry was around 22%.

Dioctyl Sulfosuccinate boasts low irritation, good biodegradability and excellent wetting and penetrating properties. It enjoys steady demand in daily chemicals, pesticides, coatings, industrial cleaning and other sectors, with notable growth especially in mild sulfate-free formulations and green surfactant replacement applications. Going forward,

the industry will focus on green development, high-end upgrading and specialization. Production will increasingly adopt bio-based raw materials and promote continuous clean production processes to reduce waste emissions. In terms of products, DOSS will evolve towards specialized grades with high purity, low foaming, temperature resistance and salt tolerance, gradually expanding into high-end sectors such as new energy, pharmaceuticals and electronic materials. Amid stricter environmental regulations and higher downstream quality requirements, DOSS will continue to replace conventional high-risk surfactants, maintaining steady growth in high-end personal care, pesticide additives and water-based coatings. The industry as a whole will see structural optimization and quality-driven growth.
