The report requires updating with new data and is sent in 48 hours after order is placed.

Diode-pumped solid-state (DPSS) lasers are a category of optically pumped lasers, where a diode laser is used as the excitation source to pump a laser crystal. DPSS lasers take advantage of the relatively narrow spectral linewidth of diode lasers in conjunction with their high brightness in order to maximize absorption and therefore increase efficiency.

DPSS lasers also have the added benefit of being far more compact than flashlamp pumped lasers and require less maintenance. Additionally, through the use of second, third, and fourth harmonic generation they can emit wavelengths from the ultraviolet through the infrared.
