The dip pretreatment system performs surface treatment through immersion processes, utilizing chemical baths for degreasing, derusting and protective conversion coating formation. Comprising sequential treatment tanks, overhead hoists, temperature control units and exhaust treatment, its PP or FRP tanks accommodate complete immersion processing. This method ensures comprehensive treatment of complex internal structures, with optional agitation mechanisms enhancing solution exchange. The standardized workflow incorporates degreasing, acid pickling and phosphating stages, with drip zones between tanks preventing solution contamination. Delivering consistent and reliable results, this system is ideal for precision components demanding stringent surface quality, extensively adopted in automotive parts and electronic component manufacturing.
