Diquat is a non-selective contact herbicide; the major use of which is for pre-harvest desiccation of a variety of crops. It is rapidly absorbed by green plant tissue and interacts with the photosynthetic process to produce compounds that destroy plant cells. It is inactivated on contact with soil and not taken up by plant roots. As a general herbicide diquat is used to control weeds before planting, before or just after crop emergence, and as a directed spray between the rows of established crops.

The global Diquat Technical market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
