The global Direct Acting Water Solenoid Valve market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The direct acting water solenoid valve means that the electromagnetic force directly acts on the valve core system. The action function of the solenoid valve depends entirely on the electromagnetic force and the return spring, and is not affected by factors such as the pressure difference of the medium. It can be started at zero pressure. Due to the large flow rate, the diaphragm can be made of special materials for hot water fluid.
