The global Direct Current Meter market size is predicted to grow from US$ 652 million in 2025 to US$ 1144 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

Direct Current Meter is an electrical measuring device used to measure the magnitude of direct current (DC) in a circuit. It is commonly used in electrical and electronic systems where DC power is used, such as batteries, solar panels, DC power supplies, and electric vehicles.

2025, global Direct Current Meter sales volume reached 3.85

million units, with average price of 173 US$ per unit.

Direct current meters are moving from niche industrial products to mainstream energy infrastructure components. Demand is being driven by EV fast charging, solar PV, battery energy storage, data centers, microgrids, and other DC power systems, where measuring only the AC side is no longer enough for accurate energy management. Analog Devices identifies EV charging stations, renewable generation, server farms, microgrids, and peer-to-peer energy sharing as key DC metering application areas.

Smart and connected DC meters are becoming the market standard. Customers increasingly require communication interfaces, remote monitoring, data logging, diagnostics, cybersecurity support, and integration with energy-management platforms. This is especially important in charging stations, distributed solar-storage systems, and data centers, where operators need real-time visibility into power flow, equipment efficiency, load balancing, and billing data.

Legal metrology and billing certification are becoming more important. As DC meters

are increasingly used for paid EV charging and commercial energy transactions, accuracy, traceability, anti-tampering design, calibration, and certification are becoming key purchasing factors. OIML notes that DC energy metering is becoming more relevant for legal metrology, especially in EV charging, and that regulatory frameworks and product standards are evolving.
