Direct energy deposition 3D metal printer is a high-end metal processing equipment based on the principle of additive manufacturing. It is widely used in aerospace, mold repair, military industry, energy and high-end manufacturing. This technology is to send metal powder or metal wire through a nozzle into the action area of ??a high-energy light source (such as laser, electron beam or plasma arc), melt it rapidly at high temperature, and deposit it on the surface of the substrate simultaneously, so as to build metal parts layer by layer or repair parts. DED printer has the advantages of high material utilization, high component density, wide range of processing size and suitability for multi-material composite manufacturing.

United States market for Direct Energy Deposition 3D Metal Printers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Direct Energy Deposition 3D Metal Printers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
