Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Direct Fed Microbial (DFM) market.

Direct fed microbial (DFM) is a live microbial feed supplement which improves the intestinal microbial balance of the host livestock. The term direct fed microbial is also referred as probiotics. The most commonly used DFM includes yeast, lactic acid bacteria, bacillus, and other bacteria. These bacteria colonize the intestine of an animal in its initial days of life. During normal fermentation, beneficial bacteria produce organic acids such as lactic acid, acetic acid, or butyric acid, which lowers the intestinal pH and prevents growth of potential pathogens. DFM are available in dry and liquid form to feed various livestock population including ruminants, poultry, swine/ pork, aquatic animals, and others.

Direct fed microbial (DFM) are gaining popularity owing to their vital role in improving

feed digestibility. Rising awareness for animal health is driving the market growth. Moreover, growing demand for processed animal feed is boosting the growth of DFM market.
