Abstracts

The global Direct-fired Rotary Kiln market size is predicted to grow from US$ 396 million in 2025 to US$ 492 million in 2032; it is expected to grow at a CAGR of 3.2% from 2026 to 2032.

In 2024, global Direct-fired Rotary Kiln production reached approximately 19,361 units, with an average global market price of around US$ 20,246 per unit. Direct-fired Rotary Kiln is a large-scale industrial thermal processing equipment designed for high-temperature treatment of bulk, granular, or powdery materials, distinguished by its core feature: direct contact between the heat source and the processed materials to enable rapid, efficient heat transfer. Its basic structure consists of a horizontally mounted, slightly inclined rotating drum—usually fabricated from heat-resistant alloy steel or lined with refractory bricks to withstand temperatures ranging from 800°C to 1,800°C—along with a combustion system installed at the “kiln head” and a flue gas collection & treatment system at the “kiln tail”. Unlike indirect-fired rotary kilns (where heat is transferred indirectly through the drum wall), direct-fired models operate by injecting fuel (such as coal, natural gas, diesel, or biomass) into the kiln head burner.

United States market for Direct-fired Rotary Kiln is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Direct-fired Rotary Kiln is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Direct-fired Rotary Kiln is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
