The global Direct Plating Copper Substrate market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

DPC ceramic PCB, also known as direct copper-clad ceramic PCB, is a printed circuit board made of ceramic materials, in which the copper layer is directly plated on the ceramic substrate. Based on thin film technology, metallization of ceramic surfaces can be achieved by magnetron sputtering. The thickness of the electric copper layer is greater than 10 microns, and the thickness can be increased through electroplating. This technology offers several advantages over traditional copper-clad PCBs.
