Abstracts

The global Direct-reading Precision Attenuator market size is predicted to grow from US$ 227 million in 2025 to US$ 346 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2024, global sales of direct-reading precision attenuators reached 520,000 units, with an average selling price of $420 per unit. Direct-reading precision attenuators are precision passive components used for RF/microwave testing and calibration, offering continuously adjustable or fixed attenuation. They are widely used in communications equipment testing, radar systems, satellite links, scientific research experiments, and RF device production lines. Upstream raw materials primarily include high-precision metal film resistors, RF connectors, aluminum alloy housings, and microwave linings. Major suppliers include Vishay, TE Connectivity, and Sumitomo Electric Industries, Ltd. Representative midstream companies include Keysight, Rohde & Schwarz, Weinschel Associates, and the domestic company Dingyang Technology. Typical single-line production capacity is 30,000 to 50,000 units per year, with a total capacity of approximately 600,000 units per year. Downstream customers include Huawei, ZTE, Nokia, Ericsson, Raytheon, Boeing, and various research institutes. Product gross profit margins remain between 35% and 42%. The future lies in attenuators with wider frequency bands and higher power handling capabilities, as well as those adapted to 5G/6G test platforms, quantum communications, and satellite Internet applications. It is expected that the market demand for high-end test equipment will continue to expand.

United States market for Direct-reading Precision Attenuator is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
