The global Direct Steam Retort market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

One of the main drivers of the direct steam retort market is the increasing demand for packaged food products. Direct steam retort systems are widely used in the food industry for sterilizing packaged food products such as canned vegetables, meat, and seafood, which helps to extend their shelf-life and prevent spoilage.

The report highlights that the Asia Pacific region is expected to be the fastest-growing market for direct steam retort systems during the forecast period. This is due to the growing population, rising disposable incomes, and changing food consumption patterns in countries such as China and India.

Another trend highlighted in the report is the increasing use of automation in direct steam retort systems. Automation can help manufacturers to reduce labor costs, improve efficiency, and ensure consistent quality and safety standards.

However, the report also notes the challenges faced by the direct steam retort market, such as the high cost of implementation and maintenance, as well as the stringent regulatory requirements for food safety.
