The global Direct Type Panel Light market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The direct type panel light refers to a type of flat LED light fixture designed for direct installation onto ceilings or walls. It consists of a slim rectangular or square panel housing multiple LED chips, a light guide plate, and a diffuser. The LED chips emit light that is evenly distributed across the panel through the light guide plate, providing a uniform and glare-free illumination. Direct type panel lights are commonly used in office spaces, commercial buildings, and residential areas for their sleek design, energy efficiency, and comfortable lighting output. They offer a modern alternative to traditional fluorescent or halogen fixtures.

The industry trend of direct type panel lights is focused on increased energy efficiency, advanced control options, and customization. As energy-saving lighting solutions gain prominence, manufacturers are developing direct type panel lights that offer higher efficacy, lower power consumption, and improved lighting quality. There is also a growing demand for smart lighting control capabilities, such as dimming, color temperature adjustment, and integration with smart home systems. Furthermore, customization options are becoming popular, allowing customers to choose different sizes, shapes, and finishes to suit their specific aesthetic and functional requirements. The industry strives to provide innovative panel light solutions that combine energy efficiency, smart functionality, and design flexibility to meet the evolving needs of customers.
