The global Direct Water Atomized Copper Powder market size is predicted to grow from US\$ 998 million in 2025 to US\$ 1337 million in 2032; it is expected to grow at a CAGR of 4.2% from 2026 to 2032.

In 2025, global production of direct water atomized copper powder reached 49,000 tons, with an average selling price of US\$20,810 per ton. Direct water atomization (DWA) copper powder refers to copper powder obtained by directly atomizing molten copper using high-pressure water jets, rapidly cooling and solidifying the molten metal, followed by drying, sieving, and grading. It typically consists of irregular particles with good green strength. Applications include powder metallurgy structural parts, sintered oil-impregnated bearings, metal integrators (MIMs), welding/brazing materials, friction materials, electro-carbon products, conductive pastes, electronic copper pastes, heat pipe cores, and diamond tools, covering industries such as automotive parts, electronics and electrical engineering, chemical catalysis, welding materials, tooling materials, and industrial machinery. The upstream includes copper cathodes/copper ingots/high-purity copper raw materials; the midstream is the manufacturing process; and the downstream connects to application systems such as automotive powder metallurgy parts, electronics and electrical engineering, thermal management, chemical catalysis, welding materials, tooling materials, additive manufacturing, and industrial machinery. The gross profit margin is approximately 20%-30%.
