The global Directional and Rotational Atherectomy System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The directional atherectomy system relies on a high-speed rotating cutting catheter to cut and remove hardened plaques in the coronary artery lumen, reducing plaque volume load and eliminating coronary artery stenosis lesions. The rotational atherectomy system uses a high-speed rotating diamond grinding head to erode lesions, mainly suitable for highly calcified lesions. First, rotational grinding is performed, followed by stent placement to improve the success rate of interventional treatment and reduce the occurrence of complications.
