Disc Thickener is mainly used for washing or thickening of low consistency pulp. In general, high pulp level and high water pressure can increase pulp capacity and ensure stability. Compared to traditional disc filter, disc thickener has no requirement for vacuum water leg or high water leg. Disc thickener is usually composed of filter tray, screen washer, tank, main gear and Inlet and outlet box, etc. as for applications. Disc thickener is not sensitive to change of pulp inlet flow and concentration, so that it can be applied widely, and handle the paper pulp with high or low freeness.
