The global Disc Tool Magazine market size is predicted to grow from US\$ 278 million in 2025 to US\$ 506 million in 2032; it is expected to grow at a CAGR of 9.1% from 2026 to 2032.

The disc tool magazine is mainly used for turning parts with hole locations or complex shapes (such as shafts, gears, etc.) in various high-precision, small-sized and hard-to-reach areas. It sets the cutting time and feed amount of each milling cutter through the computer program by the CNC system, and runs automatically after being programmed into the processing program.

The downstream customers of the tool magazine industry are mainly various machine tool manufacturers. The machine tool industry has obvious cyclical characteristics and is currently in the bottoming out and recovery stage. The general product life of machine tools is about 10 years, so the industry has a business cycle approximately every 7-10 years. Historically, the global consumption scale in 1983, 1993, 2003, and 2013 were all periodic lows. From the perspective of the 10-year cycle, the total global machine tool consumption in 2020 was US\$66.817 billion, and China's machine tool consumption was US\$21.316 billion, the lowest level in the past 10 years. China and the global market will begin to recover in 2021, and machine tool consumption will increase significantly in 2021, with year-on-year growth of 19.73% and 31.46% respectively, and are still in the bottom recovery stage. After China's machine tool consumption fell to a low of 27.16% in 2019, it has steadily increased in the past two years, reaching 35% in 2021.
