A disc type centrifuge refers to a type of centrifugal separation equipment that utilizes the principle of centrifugal force to separate substances with different densities within a liquid mixture. It consists of a series of rotating discs or bowls stacked together, creating a system of narrow passages or channels between them. The liquid mixture is introduced into the centrifuge, and as it rotates, the centrifugal force causes the denser particles or substances to move towards the outer edge of the discs, while the lighter components move towards the center.

Disc type centrifuge is a centrifugal separation equipment that uses rotating discs or bowls to separate substances based on their density in a liquid mixture. It finds applications in various industries for solid-liquid separation, liquid-liquid separation, and

clarification processes. Disc type centrifuges are known for their high separation efficiency, continuous operation, and versatility in handling different types of liquid mixtures.
