## Abstracts

A disconnect terminal block is a terminal block that, in addition to the function of electrically connecting cables to which terminals are crimped, as with a normal terminal block, has a disconnect function. Therefore, it can be easily disconnected electrically by simply pulling on the mechanism by hand, without removing the terminals.

Since there is no need to loosen screws when disconnecting, there is no need to touch the charging section even when power is being supplied, eliminating the risk of electric shock. The terminals are connected to the terminal block with screws.

The global Disconnect Terminal Block market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
