The global Disilicon Hexahydride market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Disilicon hexahydride is a toxic compound with the molecular formula Si_2H_6 that is gaseous at room temperature. Its properties are very similar to those of ethane, and both are colorless and flammable gases, but its silicon-silicon bond is weaker than the carbon-carbon bond of ethane, so it is less stable than ethane. Disilanes are generally a good source of hydrogen, which can be obtained by simple chemical reactions. In addition, it can also be used to prepare pure silicon by thin film deposition, which is one of the important special electronic grade gases in the semiconductor industry.

United States market for Disilicon Hexahydride is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
