Disinfectants are chemical agents applied to non-living objects in order to destroy bacteria, viruses, fungi, mold or mildews living on the objects. By definition, disinfectant formulas must be registered with the Environmental Protection Agency (EPA). The “active ingredient” in each disinfectant formula is what kills pathogens, usually by disrupting or damaging their cells. Active ingredients are usually aided by other ingredients with various purposes. For example, surfactants can be added to a disinfectant formula to provide consistent wetting on a surface or to help in cleaning.
