According to our LPI (LP Information) latest study, the global Disk Laser market size was valued at US\$ million in 2023. With growing demand in downstream market, the Disk Laser is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Disk Laser market. Disk Laser are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Disk Laser. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Disk Laser market.

The Disk Laser is a type of diode pumped solid-state laser characterized by a heat sink and laser output that are realized on opposite sides of a thin layer of active gain medium. Despite their name, disk lasers do not have to be circular. The thickness of the disk is considerably smaller than the laser beam diameter.

The Disk Laser allows very high average and peak powers due to its large area leading to moderate power densities on the active material, thus enabling applications in processes involving welding, cutting, laser metal deposition, remote welding and further surface treatments.
