## Abstracts

The global Dispersion Compensation Fiber Modules market size is predicted to grow from US\$ 78.04 million in 2025 to US\$ 105 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In optical fiber communications, dispersion compensation modules (DCM) (also called dispersion compensation units, DCU) can be used for compensating the chromatic dispersion of, e.g., a long span of transmission fiber. Typically, such a module provides a fixed amount of dispersion (e.g. normal dispersion in the 1.6- $\mu$ m spectral region, with some wavelength dependence of the group delay dispersion), although tunable dispersion modules are also available. A module can easily be inserted into a fiber-optic link because it has fiber connectors for the input and output. The insertion losses may be significant, but may be compensated with a fiber amplifier, e.g. an erbium-doped fiber amplifier in a 1.5- $\mu$ m telecom system. A dispersion-compensating module is often placed between two fiber amplifiers.

United States market for Dispersion Compensation Fiber Modules is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Dispersion Compensation Fiber Modules is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
