## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Displays play an important role in the avionics system by providing information on weather conditions, navigation, altitude, and flight details related to temperature, fuel availability, and air pressure. Initially analog devices performed these functions, but manufacturers have shifted to digital display systems, which are also known as glass cockpits. While each analog device could perform only one function, few displays can provide multiple information. In addition, digital display system makes the cockpit lighter compared to analog cockpit.
