Display Calibration Management Tools are available on services and solution basis. Calibration software is very well suited to general monitor use, owing to commercially available calibration kits such as the Eye-One series. Moreover, software-based display calibration improves the color with the adjustment of white points, luminance, and gamma curves of the display. Since software calibration can be used to create profiles for the monitors, it is also an effective means of color management of the displays or monitors. Calibration software can be used to support and guide calibration management activities. Furthermore, use of software for calibration management enables fast, easy and accurate analysis of calibration records and identification of historical trends.
