Display glass wafers are a building block material used to make display devices such as liquid crystal displays and organic light-emitting diode (OLED) displays. It is usually made of high-purity glass material and processed through multiple processes. During the manufacturing process, one or more layers of conductive materials and organic materials are coated on the wafer, and the display effect is realized by making the organic materials emit light by applying electricity. Display glass wafers have the characteristics of high precision, high transparency, low light leakage and low thermal expansion, and are one of the important materials for manufacturing high-quality display devices.
