Display and touch panel testing equipment is a specialized automated system used for comprehensive testing of the appearance, optical, electrical, and touch performance of LCD, OLED, Mini/Micro LED displays, and capacitive/resistive touch panels. It typically integrates industrial cameras and lenses, precision motion platforms, optical illumination systems, test probes/fixtures, high-speed data acquisition and algorithm software, and automatic loading/unloading and communication interfaces. The equipment can perform online or offline testing of key panel parameters such as brightness, contrast, chromaticity, mura, dead pixels, line defects, scratches, dirt, glass chipping, open/short circuits at touch nodes, linearity, and response speed. It also integrates with the production line's MES system to achieve data traceability and closed-loop process optimization. Display and touch panel testing equipment is widely used in the production processes of display modules and touch components for mobile phones, tablets, laptops, televisions, automotive central control and instrument panels, industrial HMIs, and wearable devices. It is a key quality inspection tool for ensuring yield, improving consistency, and meeting the high-quality requirements of end-brand manufacturers.

The upstream of display and touch panel testing equipment includes core components such as industrial cameras and lenses, line scan/area array light sources, motion
