A disposable airflow nebulizer is used to convert liquid drugs into nebulized form for patients to inhale through the respiratory tract. This type of nebulizer is commonly used to treat respiratory diseases such as asthma, chronic obstructive pulmonary disease (COPD), pneumonia, etc. Unlike traditional air atomizers, disposable air atomizers are usually designed as disposable and can be discarded after use without the need for cleaning and disinfection, thereby reducing the risk of cross infection. They usually have simple and easy-to-use designs that can be used by patients at home or in medical institutions.
