The global Disposable Arteriovenous Cannula market size is predicted to grow from US$ 421 million in 2025 to US$ 850 million in 2031; it is expected to grow at a CAGR of 12.4% from 2025 to 2031.

Disposable arteriovenous puncture needle is used for venipuncture in blood purification treatment of acute and chronic renal failure.

The global medical device market is estimated to be US$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for healthcare from an aging population, rising prevalence of chronic and infectious diseases, and expansion in emerging markets. In recent years, with the aging of my country's population and the continuous increase in the number of medical consultations, the demand for puncture needle consumables is also increasing. At the same time, with the continuous upgrading of clinical diagnosis and treatment, the demand for puncture needles has gradually expanded from injection and diagnosis to the application of interventional puncture devices, allowing more minimally invasive surgery to replace traditional surgery and take on the important role of establishing channels.
