The global Disposable Cryoablation Needle market size is predicted to grow from US\$ 580 million in 2025 to US\$ 1087 million in 2032; it is expected to grow at a CAGR of 9.4% from 2026 to 2032.

In 2025, global sales of disposable cryoablation needles reached 1.85 million units, with an average selling price of \$320 per unit. Total global production capacity stands at approximately 2.1 million units per year, and the industry's average gross margin is around 52%. These needles are medical consumables used in minimally invasive interventional therapy; they utilize high-pressure gas or a cryogenic medium to rapidly generate a low-temperature 'ice ball' at the needle tip. This creates intracellular and extracellular ice crystals and ruptures cell membranes within the target tissue, thereby achieving precise necrosis and inactivation of tumors. Widely used in image-guided minimally invasive treatments for liver cancer, lung cancer, renal tumors, and certain benign lesions, the technology offers advantages such as minimal trauma, rapid recovery, and the feasibility of repeat treatments.

Upstream components include medical-grade stainless steel needle shafts, precision catheters, ultra-fine luminal tubing, high-pressure gas storage materials, insulation and thermal barrier materials, and biocompatible coatings. Downstream distribution channels encompass interventional radiology departments in top-tier (Grade III-A) hospitals, specialized oncology hospitals, minimally invasive surgery centers, and high-end medical device distribution networks. Future development is focused on intelligent temperature control feedback, visual guidance for ablation, and integration with image-guided navigation systems. Demand growth is primarily driven by the rising penetration rate of minimally invasive tumor therapies, an aging population, and the trend of interventional procedures replacing open surgeries; key business opportunities lie in

high-precision energy control systems, image-fusion navigation, and the domestic substitution and upgrading of high-end interventional consumables.
