The global Disposable Flexible Bronchoscope market size is predicted to grow from US$ 977 million in 2025 to US$ 2245 million in 2032; it is expected to grow at a CAGR of 12.9% from 2026 to 2032.

In 2024, global sales of disposable flexible bronchoscopes reached 4.8 million units, with an average selling price of US$185 per unit. Disposable flexible bronchoscopes are single-use, bendable imaging endoscopes used for airway visualization, sputum suction, foreign body removal, and airway intubation guidance. Their core components include a flexible insertion tube, a distal miniature CMOS camera, a light-guiding illumination system, and a disposable flexible operating handle. This avoids the cross-infection risks associated with cleaning and disinfecting traditional reusable bronchoscopes, making them particularly suitable for high-infection-control scenarios such as ICUs, emergency rooms, and operating rooms. Upstream raw materials include medical-grade polyurethane/PEEK tubing, miniature lenses, CMOS image sensors, LED light sources, and connecting wires. Major suppliers include Sony, OmniVision, Gore Medical, Asahi Kasei, and Sumitomo Electric Industries. Downstream applications include respiratory departments, anesthesiology departments, ICUs, and pre-hospital emergency systems in general hospitals. Global total production capacity is approximately 6.5 million units, with an industry gross margin ranging from approximately 44% to 58%. Downstream consumption includes approximately 45% for ICU procedures and bronchial suctioning, approximately 35% for anesthesia and intubation assistance, and approximately 20% for emergency and outpatient treatment. Upstream material consumption includes approximately 62% for CMOS imaging components and optical modules. Future directions include improving imaging clarity, achieving ultra-fine diameters (?2.0mm), integrating with AI airway recognition algorithms, and incorporating them into standardized procurement systems for
