A disposable Holmium laser fiber, sometimes simply referred to as a disposable laser fiber, is a medical device used in laser lithotripsy procedures. Laser lithotripsy is a minimally invasive surgical technique used to fragment and remove stones in various parts of the body, such as the urinary tract, gallbladder, or bile ducts. Holmium laser fibers are specifically designed for use with Holmium:YAG lasers, which are commonly used in urology and other medical specialties for their precision and effectiveness in breaking down stones.

Holmium laser lithotripsy, using disposable Holmium laser fibers, has become a

standard and effective approach for treating kidney stones, ureteral stones, and other stone-related conditions. The use of disposable fibers ensures that the laser energy is efficiently delivered to the stone, enabling effective fragmentation and removal.
