A disposable insulin injection needle, also known as an insulin pen needle or insulin syringe needle, is a medical device designed for the subcutaneous injection of insulin. It is a thin, hollow needle that attaches to an insulin pen or syringe and is used by individuals with diabetes to administer insulin, a hormone required to manage blood sugar levels.

Insulin needles are typically made of stainless steel or other medical-grade materials. They are designed to be sharp and durable for smooth and painless injections. The gauge refers to the thickness of the needle, and the length refers to the needle's size. Insulin needles are available in various gauges (commonly ranging from 28 to 31

gauge) and lengths (ranging from 4mm to 8mm). Thinner needles (higher gauge) are less painful for injections. Insulin needles are sterilized and intended for single-use only. After each injection, the needle is disposed of to maintain hygiene and prevent infection.
