A disposable irrigation drainage tube is a medical device used to remove fluids or irrigate a specific area of the body. It is typically made of flexible plastic and comes in various lengths and diameters. The tube is inserted into the body through a surgical incision or natural body opening, such as a wound or a drainage site, to facilitate the drainage of fluids or the irrigation of a specific area. Once the procedure is complete, the tube is removed and discarded, hence the term 'disposable.' These tubes are commonly used in surgical procedures, wound care, and post-operative drainage management.
