The global Disposable Laparoscopic Grasping Forceps market size is predicted to grow from US\$ 1562 million in 2025 to US\$ 2813 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

In 2025, global sales of disposable laparoscopic grasping forceps reached approximately 42 million units, with an average selling price of \$38. Disposable laparoscopic grasping forceps are single-use instruments used in minimally invasive surgical procedures, primarily for tissue clamping, traction, and separation. They prevent cross-infection and reduce cleaning and sterilization costs, and are widely used in laparoscopic surgeries in general surgery, gynecology, and urology. The products typically consist of stainless steel or titanium alloy forceps heads, medical-grade stainless steel levers, and engineering plastic or medical polymer handles. Upstream raw materials are mainly medical-grade stainless steel, engineering plastics, and silicone. Downstream, they are primarily supplied to minimally invasive surgery departments in hospitals and reach end users through distributors and centralized procurement platforms.

From an industry structure perspective, the total global production capacity of disposable laparoscopic grasping forceps in 2025 was approximately 48 million units, with an average gross profit margin of approximately 45%-55%. Demand is mainly driven by the continued increase in the number of minimally invasive surgeries, the replacement of reusable instruments with disposable consumables, and stricter hospital infection control requirements. The way forward lies in focusing on structural optimization, lightweight design, and platform-based integration with endoscopic systems. Companies with large-scale manufacturing capabilities, stable quality control, and advantages in centralized procurement will gain continuous business opportunities

in centralized procurement and the international market.

The disposable laparoscopic grasping forceps market is experiencing rapid growth, primarily driven by the increasing prevalence of minimally invasive surgery, heightened awareness of infection control in hospitals, and the replacement of reusable instruments with disposable consumables. As the number of laparoscopic surgeries worldwide increases annually, particularly in general surgery, gynecology, and urology, the demand for high precision, reliability, and single-use surgical instruments is constantly growing, making disposable grasping forceps a standard component. Simultaneously, reducing cross-infection, lowering cleaning and sterilization costs, and improving surgical efficiency have led hospitals to favor cost-effective disposable products, further stabilizing market demand.

Technological upgrades and product innovation are also core to market competition. Lightweight designs, ergonomic handles, titanium alloy forceps heads, and compatibility with multi-brand laparoscopic systems have become important directions for companies to differentiate themselves. In the market, internationally renowned medical device companies dominate the high-end market, while domestic manufacturers are rapidly expanding in the low-to-mid-end market by leveraging price advantages, rapid delivery, and familiarity with regional healthcare systems.

Looking ahead, as minimally invasive surgery becomes more prevalent in primary healthcare institutions and day surgery centers, and with the advancement of global centralized procurement trends, market competition will intensify. However, high-quality, high-value-added, and platform-compatible disposable laparoscopic grasping forceps will still have long-term growth potential. Companies that can continuously focus on technological innovation, production scaling, and hospital relationship management will gain stable market share and profitability.
