The global Disposable Medical Cold Pack market size is predicted to grow from US$ 82.33 million in 2025 to US$ 109 million in 2032; it is expected to grow at a CAGR of 4.2% from 2026 to 2032.

In 2024, global Disposable Medical Cold Pack production reached approximately 32.77 million units , with an average global market price of around US$ 2.25 per unit. The global single-line production capacity ranges from 800k to 1 million units per year.Disposable medical cold pack is ready-to-use physical cooling devices designed specifically for medical and emergency scenarios. Their core feature is that they are discarded after a single use, eliminating the risk of cross-infection. These products typically consist of multiple layers of material: the outer layer is a high-strength composite non-woven fabric or polyethylene film, providing sealing and tear resistance; the inner layer encapsulates a refrigerant (commonly a mixture of inorganic salts such as ammonium nitrate and urea with pure water, or a customized polymer gel). The cold packs are quickly cooled by breaking and rubbing the bag, triggering an endothermic reaction (chemically) or pre-cooling activation (physically). Their applications cover scenarios such as post-operative swelling reduction in hospitals, temporary cold chain support for vaccines, first aid for sports injuries, and auxiliary cooling for fever. They strictly distinguish between sterilized (for broken skin/surgery) and non-sterile (for intact skin) types. They are hygienic, portable, and temperature-controllable, making them important consumables in modern medical and emergency response systems.
